Climate change impacts on agriculture and nutrition are significant. President Barack Obama, in his Climate Action Plan, emphasized the need for reducing carbon emissions and addressing climate risks. The Agriculture Organization (FAO) reports that climate change impacts agriculture by affecting crop yields, pest management, and water availability. Obama’s Climate Action Plan, unveiled in 2013, commits the United States to reducing carbon emissions by 2020. The Administration has also supported development of a strong EPA proposal to address climate change, with the goal of reducing carbon emissions to between twenty-six and twenty-eight percent below 2005 levels.

The importance of reducing climate change risks for agriculturists is emphasized in the book “Agro Climate Change: Minimizing Climatic Risks for Agriculturists,” published by Francis Balungi. This work highlights the need for strategies to combat climate change, which includes developing adaptive agricultural practices and improving crop insurance programs to reduce risks associated with extreme weather events.

In 2014, President Obama spoke at the U.N. Climate Summit, where he underscored the urgency and growing threat of a changing climate. The book by Balungi offers guidelines for minimizing climatic risks for agriculturists, focusing on strategies and plans to adapt to climate change impacts. The Obama Administration has supported initiatives to reduce agricultural carbon emissions and improve crop insurance programs to help farmers manage climate-related risks. The Administration has also supported development of a strong EPA proposal to address climate change, with the goal of reducing carbon emissions to between twenty-six and twenty-eight percent below 2005 levels.

In summary, the Obama Administration has recognized the importance of reducing climate change risks for agriculturists and has taken steps to support development of adaptive agricultural practices and improve crop insurance programs to help farmers manage climate-related risks.
